# Corovent CDV

Continuous Dry Verge

As a mortar free dry fix solution, the Corovent Continuous Dry Verge offers a maintenance free, clean, attractive finish to gable ends without the inconvenience of using mortar and clips.

Manufactured from high quality UPVC, the Corovent CDV protects the verge from UV making it extremely resistant to light degradation and atmospheric pollution, whilst also resisting against wind damage. Corovent CDV System has been specially designed to overcome the problem of water penetration at gable ends.

Compatible with Flat, High and Low Profiled tiles, including Plain and Rosemary Tiles, the Corovent CDV is ideal for use with PVC-U bargeboards, fascias and soffits.

A range of connectors and ridge end caps are also available to complement the range.
